DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 2. Claims 1, 7-14, 24, and 27 are rejected under 35 U.S.C. 102(e) as being anticipated by **Squibb** (U.S. Patent 6,301,677 B1).

Regarding claim 1, **Squibb** teaches a method of operating a filesystem, said filesystem including a live filespace accessible to users and a zombie filespace not accessible to users, said method including recording changes to said zombie filespace (i.e., filespace for storing hidden and system files) in a persistent memory (col. 13, lines 19-20; col. 2, lines 1-4; col. 7, lines 33-39).

Regarding claims 7 and 8, **Squibb** further teaches an operation performed using said zombie filespace, checkpointing said filesystem during performance of said operation (col. 7, lines 27-32; col. 2, lines 1-4; col. 7, lines 33-39).

Art Unit: 2167

Regarding claims 9-11, **Squibb** further teaches replaying a set of said changes in response to said record (col. 2, lines 21-33; col. 2, lines 14-21).

Regarding claims 12-14, **Squibb** further teaches wherein said persistent memory includes a log of substantially all changes, within a selected time duration, to either said live filespace or said zombie filespace (col. 2, lines 14-21; col. 7, lines 33-39).

Regarding claims 24 and 27, **Squibb** teaches a method of operating a filesystem, said filesystem including a live filespace accessible to users and a zombie filespace not accessible to users, said method including replay of an operation on a file, said operation using said zombie filespace (col. 7, lines 33-39; col. 2, lines 21-33; col. 2, lines 14-21).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

Art Unit: 2167

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 15, 17-18, and 21 rejected under 35 U.S.C. 103(a) as being unpatentable over **Iwamoto et al.** (U.S. Patent 5,604,900) in view of **Squibb** (U.S. Patent 6,301,677 B1).

Regarding claim 15, **Iwamoto et al.** teaches a method of operating a filesystem, said filesystem including a live filespace accessible to users and a zombie filespace not accessible to users, said method including

dynamically growing said filespace (col. 2, lines 46-48, col. 3, lines 15-27). **Iwamoto** does not explicitly teach zombie filespace.

Squibb, however teaches zombie filespace as network file systems where a user may lack permission to or the ability to modify a particular storage (col. 13, lines 19-20).

It would have been obvious to one of ordinary skill in the art at the time of the invention was made to combine the teachings of the cited references because **Squibb's** teaching would have allowed **Iwamoto's** to enhance the system performance of the primary filespace by carrying out a system file operation in another filespace.

Art Unit: 2167

Regarding claim 17, **Iwamoto et al.** further teaches wherein said dynamic growth occurs, for an operation performed using said zombie filespace, during performance of said operation (col. 4, lines 39-46).

Regarding claims 18 and 21, **Iwamoto et al.** further teaches a method of operating a filesystem, said filesystem including a live filespace accessible to users and a zombie filespace not accessible to users, said method including

transfer of a file to said zombie filespace before breakage of links to blocks in said file, in response to an operation on said file, said operation using said zombie filespace (col. 6, lines 38-45; col. 4, lines 41-45; Fig. 1, elements 4, 44, and 22 (i.e., expanded space)).

Allowable Subject Matter

5. Claims 2-6, 16, 19-20, 22-23, 25-26, and 28-29 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is an examiner's statement of reasons for allowance:

Prior art of record fails to teach a combination of elements including breaking links associating disk blocks with said file in a plurality of steps while said file or a portion of file is associated with said zombie filespace, wherein said recording of

Art Unit: 2167

changes includes recording said breaking of links in a plurality of steps as recited in dependent claims 2 and 3.

Prior art of record fails to teach a combination of elements including for an operation apparent to users as substantially atomic, performing said operation in a plurality of steps using said zombie filespace, wherein said recording changes is performed in said persistent memory for each of said plurality of step as recited in dependent claim 4.

Prior art of record fails to teach a combination of elements including an operation performed on a file having attached data elements, performing said operation using said zombie file-space as recited in dependent claim 5.

Prior art of record fails to teach a combination of elements including for an operation performed using said zombie filespace, altering a size of said zombie filespace during performance of said operation as recited in dependent claim 6.

Prior art of record fails to teach a combination of elements including allocating storage within said zombie filespace for metadata associated with said file and performing said dynamic growth in response to failure of said allocation storage as recited in dependent claim 16.

Art Unit: 2167

Prior art of record fails to teach a combination of elements including breaking a link associating with said live filespace and breaking links associating disk blocks with said file in a plurality of steps while said file is associated with said zombie filespace, recording said breaking of links in a plurality of steps, and altering said live filespace to reflect said deletion operation as recited in dependent claims 19 and 22.

Prior art of record fails to teach a combination of elements including breaking a link associating said portion with said file in said live filespace and breaking links associating disk blocks with said file in a plurality of steps while a portion of said file is associated with said zombie filespace, wherein said recording of changes includes recording said breaking of links in a plurality of steps, and altering said live filespace to reflect said changes associated with said breaking of links as recited in dependent claims 20 and 23.

Prior art of record fails to teach a combination of elements including breaking links associating disk blocks with said file in a plurality of steps while said file is associated with said zombie filespace, recording said breaking of links in said persistent memory in a plurality of steps, and altering said live filespace to reflect said deletion operation, and recording said alteration in said persistent memory as recited in dependent claims 25 and 28.

Application/Control Number: 09/932,579 Page 8

Art Unit: 2167

Prior art of record fails to teach a combination of elements including breaking links associating disk blocks with said file in a plurality of steps while a portion of file is associated with said zombie filespace, recording said breaking of links in said persistent memory in a plurality of steps, and altering said live filespace to reflect changes associated with said breaking links, and recording said alteration in said persistent memory as recited in dependent claims 26 and 29.

Response to Argument

6. Applicant's arguments with respect to claims 1-29 have been considered but are most in view of the new ground(s) of rejection.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leslie Wong whose telephone number is (571) 272-4120. The examiner can normally be reached on Monday to Friday 9:30am - 6:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John E Breene can be reached on (571) 272-4107. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
